

Smart Search Menus

Smart Search menus use the concept of “favorites” or “often used choices” in search fields. The system will automatically hide any unused search field choices and property types. These Smart Search Menus are used throughout Matrix, but are recognized in the Property Tab and within the search fields.

1.1 Property Type Smart Search Menu

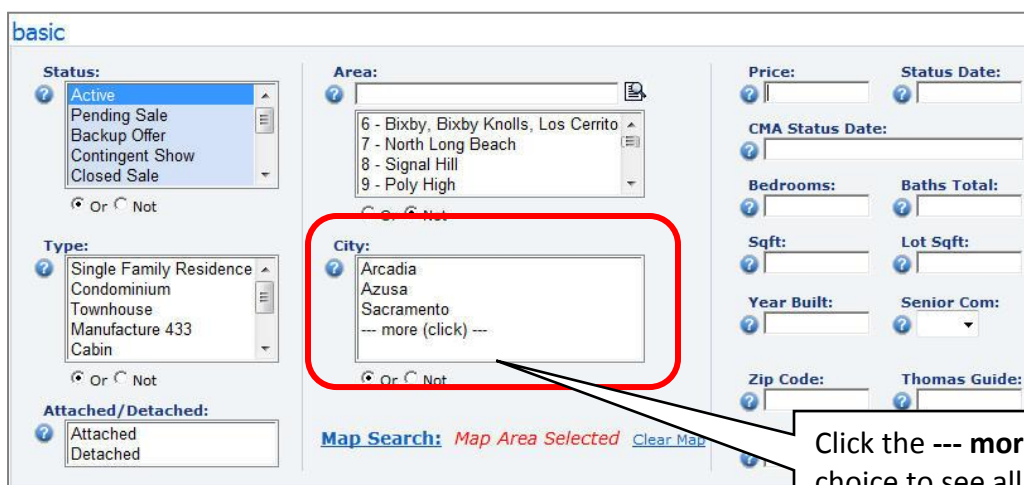

Matrix will automatically hide any unused property types from your view. This feature presents a clean and sleek look. For example, if you primarily search for residential and residential income listings, Matrix will automatically hide the eight property types from your view (*Residential Lease, Land/Lot, Mobile, Business Opportunity, Commercial /Industrial and Commercial Lease*).

Note: click the **Show 11 more categories** link to search for other property types, open houses, caravans and property history.

1.2 Property Type Smart Search Menu

Matrix will automatically hide any unused choices from a search fields. It will only display your most recently used selection. This feature allows you to quickly select a choice set versus scrolling through all the options available.

Click the **--- more (click) ---** choice to see all the choices for that particular search field
